

Ms. Anna's Classroom Newsletter 2020

Keepers Talk and Enrichment

Baby Mohan has grown! He is now 1,600 lbs. He is still considered a baby until he is 10 years old. The preschoolers were able to share their ages with Mr. Rob. Mohan is still a baby he is no longer a picky eater and gets a food enrichment of hay. The rhinos also get a scent enrichment of cinnamon and onion!

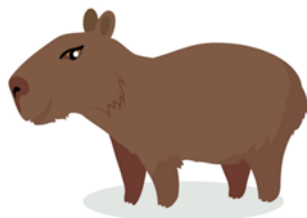

Ms. Kat and Ms. Shelby came out to show us the difference between a turtle and a tortoise. Tortoise live on land where turtles live in water. Tasha the tortoise was fun to watch walking across the floor! Tasha and Nunchuck the Chuckwalla got a food enrichment of grapes and bananas.

Biofact

Ms. Judy talked with us about the capybara's and anteater's skull. Capybaras are the largest rodent. Their front teeth never stop growing! Anteaters have long tongues. Their tongue moves in and out 150 times a minute!

Animal Ambassador

Ms. Robin showed us a toy snake to see different parts of a snake. She showed how they have no ears or holes and that they feel the ground to know if something is coming. She then showed Kenny who is a 23-year-old sand boa. She told us a fun fact: boy Kenyan sand boas are thinner than girl ones.

Socials

We were able to finally harvest the food we planted last year in the Heritage Farm garden. We delivered them to the animals and got to see them eat our hard work!

Thank You!

- to Ms. Lynn for decorating the classroom for fall and Halloween
- to Ms. Lynda (preschool docent) for being a mystery reader!
